

Customer Service Advice from Telstra

Natural Disaster events impact service in the mid north coast region

Telstra is working to manage the significant impact to Telstra services that has occurred as a result of a Natural Disaster in the mid north coast of New South Wales, on or about Monday 30 March 2009 through to Wednesday 1 April.

Due to the affect of damages to the Telstra telecommunications network caused by severe rains, damaging winds and flooding, there has been a significant increase in the number of Telstra services being reported as faulty. As a result, there has been some disruption to service and delays to normal installation and repair activities. Telstra apologises to any affected customers.

Information as to the nature of these severe weather events can be sourced from the Bureau of Meteorology (BOM). The area affected was impacted by flash flooding, issued for New South Wales initially at 4:20 pm on Monday 30 March 2009, as widely reported in the news media after the events.

Telstra has identified that the effect of these circumstances applies to approximately 3462 services. This number may increase as Telstra assesses the full affect of the extreme weather conditions. Based on current information, the resumption date of normal service operations is expected to be 24 April 2009. This date is indicative only; Telstra customers should anticipate that some further delays may occur.

Telstra regrets any inconvenience caused to customers and thanks them for their patience whilst this work is being undertaken.
